## Staggered Elections and Redistricting

Piper Benedict

## Staggered Elections and Redistricting

In about half of U.S. states, voters elect one or more of their legislative chambers on a staggered basis. Margaret B. Weston, *One Person, No Vote: Staggered Elections, Redistricting, and Disenfranchisement*, 121 Yale L.J. 2013, 2014 (2012). In California, for example, half of its state senatorial districts are up for election every two years and each senator serves a four-year term. *Id.* In many of these states, including California, voters elect odd-numbered districts during presidential-election years and even-numbered districts during midterm-election years. *Id.* Staggered terms have the effect of insulating upper legislative chambers from political influence and promoting continuity in the legislative body by ensuring that all districts are never up for election at the same time. *Id.* at 2025. However, an often-overlooked consequence of these staggered term systems occurs in many of these states every ten years after they redraw their district lines.

The process of decennial redistricting coupled with staggered terms essentially causes some voters to be temporarily disenfranchised while others become temporarily double-enfranchised. *Id.* at 2013. In California's case, a voter who, as a result of redistricting, moved from district one to district two, will have voted in 2020 for their old representative and will vote again in 2022 for their new representative after redistricting. League of Women Voters of California, *Deferred and Accelerated Voters Redistricting and the California State Senate*. These voters, who are essentially double-enfranchised by having the opportunity to vote twice in a four-year period, are termed "accelerated" voters. *Id.* Whereas a voter who moved from district two to district one will have voted in 2018 for their old representative but will not have the opportunity to vote for a new representative until 2024. *Id.* For two years that voter will have a

representative that they had no hand in selecting. These citizens, who will not have the opportunity to vote for six years, are termed “deferred” voters. *Id.*

State and federal courts across the country have deemed this temporary disenfranchisement to be an “inevitable byproduct of reapportioning a legislative body whose members are elected for staggered four-year terms.” *Legislature v. Reinecke*, 516 P.2d 6, 12 (Cal.1973). Furthermore, courts have determined that this type of disenfranchisement does not violate the Equal Protection Clause “so long as no particular group is uniquely burdened” *Baldus v. Members of Wisconsin Gov't Accountability Bd.*, 849 F. Supp. 2d 840, 852 (E.D. Wis. 2012). Courts use the “rational-basis” test to determine constitutionality in these cases, and many courts throughout the country have determined that temporary disenfranchisement due to redistricting in staggered election states meets the rational-basis test. *Donatelli v. Mitchell*, 2 F.3d 508, 515–16 (3d Cir. 1993). As long as the state has a rational reason for creating this disenfranchisement, this outcome does not violate Equal Protection. *Reinecke*, 516 P.2d at 12 (holding that California’s goal of maintaining “orderly operation of the four-year staggered terms system” in an effort to keep “stability and continuity in the Senate” qualified as a rational basis for producing temporary disenfranchisement). While courts have found this type of disenfranchisement to be constitutional, many states have taken measures to prevent this consequence.

States that have not altered their laws to address this are left with deferred and accelerated voters after each redistricting cycle. They may also see representatives whose terms continue past redistricting (“holdover” senators) now representing a district where they do not reside or where few or none of their former constituents reside. To combat this, some states continue to allow deferred and accelerated voters but reassign holdover senators to new

numbered districts. Margaret B. Weston, *One Person, No Vote: Staggered Elections, Redistricting, and Disenfranchisement*, 121 Yale L.J. 2013, 2016 (2012). They will usually reassign these senators to districts that align more closely with the makeup of their former district. *Id.* Still others have taken more drastic steps to resolve these issues. Several states have adopted a system of truncated terms following redistricting. In these states, including Florida, after the new lines are drawn, all districts hold elections in the first cycle after redistricting so that all voters in their new districts have the opportunity to vote for a representative. *Id.* at 2018. To restore their staggered system, half of the districts will have a truncated two-year term following redistricting. *Id.* at 2019. Some states alternate truncated terms while others draw lots to determine short and long terms. *Id.* This solution eliminates the risk of temporary disenfranchisement and double-enfranchisement due to redistricting in a staggered term system. *Id.*
